

BUSINESS PERFORMANCE FOR Q3 2024

EDL-GEN HYDROPOWER PRODUCTION EXCEEDS TARGET

EDL-Generation Public Company (EDL-Gen) owns and operates a total of 10 hydropower plants. In Q3 2024, the company generated 1,000.35 GWh of electricity, exceeding the planned target by 13.92% and representing a 5.87% increase compared to the same period of 2023.

This outstanding performance was largely driven by favourable weather conditions, particularly higher-than-average rainfall in northern provinces and reservoir areas. Rainfall levels exceeded the 10-year historical average, enabling efficient water resource management and contributing to robust power generation outcomes. These results also underscore the company's strategic planning for future hydropower production.

In addition, electricity production from Independent Power Producer (IPP) projects, where EDL-Gen holds equity stakes, reached 1,433.02 GWh, achieving 98.84% of the planned target.

Combined, EDL-Gen's total electricity production in Q3 2024 reached 2,433.37 GWh, surpassing the planned target of 2,328.04 GWh by 4.52%. This includes production from both wholly-owned hydropower plants and IPP projects.

The company's strong operational performance demonstrates its commitment to delivering reliable and sustainable energy, reinforcing its leadership in the hydropower sector in Laos.
